KDDI provides co-location services for its customers who may process cardholder data. KDDI does not have any access to customer systems where cardholder data may exist

Describe how the business is otherwise involved in or has the ability to impact the security of its customers' account data.	This assessment covers the provision of co-location data centre services. KDDI does not store, process or transmit any cardholder data. KDDI does not have any access to customer systems where cardholder data may exist or have any other functions or services that may impact the security of customers' account data.
Describe system components that could impact the security of account data.	Physical security controls – failure of CCTV and/or access control systems could potentially impact the physical security of customers' account data (although logical security remains the full responsibility of the customers).

### Part 2. Executive Summary (continued)

#### Part 2c. Description of Payment Card Environment

Provide a high-level description of the environment covered by this Assessment.

For example:

- Connections into and out of the cardholder data environment (CDE).
- Critical system components within the CDE, such as POI devices, databases, web servers, etc., and any other necessary payment components, as applicable.
- System components that could impact the security of account data.

KDDI provides co-location physical hosting services and facilities for numerous customers; there is a strong likelihood that these customers could be processing cardholder data within these environments. For this reason, KDDI are required to align their physical security related controls to PCI DSS for these co-location sites.

The services offered include the provision of the physical environment, the supporting environmental services (e.g. mains power, UPS, cooling, fire detection and suppression) and physical security for the environments.

Customer equipment is supplied and owned by the customer and KDDI has no logical access to this equipment.

KDDI offers two variants of this service in the Léon Frot data centre in Paris:

- 1. Dedicated Facilities Management (DFM) computer suites dedicated to a single customer, where access is controlled with, as a minimum, proximity access control readers and in some cases additional measures as specified by the customer.
- Shared Facilities Management (SFM) either single or multiple full equipment racks within a computer suite where the suite is access controlled by proximity access control readers for a number of customers.

Indicate whether the environment includes segmentation to reduce the scope of the Assessment.	☐ Yes	⊠ No
(Refer to the "Segmentation" section of PCI DSS for guidance on segmentation)		

### Part 2d. In-Scope Locations/Facilities (ROC Section 4.6)

List all types of physical locations/facilities (for example, corporate offices, data centers, call centers and mail rooms) in scope for this Assessment.
